Magnitude of the Demographic Challenge

- By 2030: 20% of US population will be 65+
- By 2050: 19 million people in US will be 85+
- **By 2030: 2/3's of US cancer survivors will be 65+**

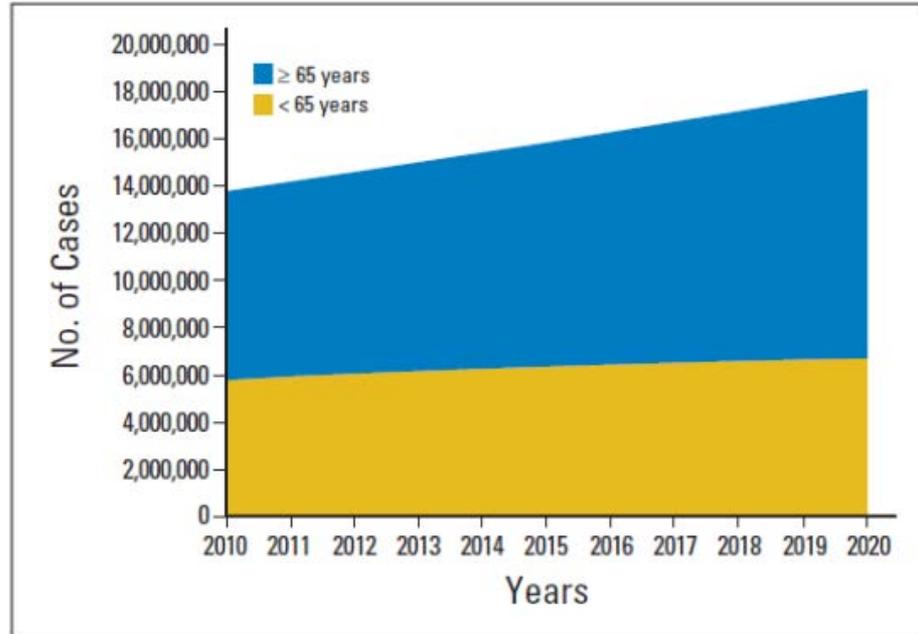

Fig 1. Estimated number of persons with history of cancer from 1971 to 2008, by age group, projected through the year 2030. Data adapted.¹

Table 1. Treatment Summary Elements

Element
Diagnostic tests performed and results
Tumor characteristics (eg, site, stage and grade, hormone receptor status, marker information)
Dates of treatment initiation and completion
Surgery, chemotherapy, radiotherapy, transplantation, hormonal therapy, genetic therapy, or other therapies provided, including agents used, treatment regimens, total dosage, identifying No. and title of clinical trials (if any), indicators of treatment response, and toxicities experienced during treatment
Psychosocial, nutritional, and other supportive services provided
Full contact information for treating institutions and key individual providers

NOTE. Data adapted.²⁴

Considerations for Older Adults

Table 1 – Geriatric-specific recommendations for survivorship care plan.

Components of a survivorship care plan	Geriatric-specific recommendations
Overall plan document	<ul style="list-style-type: none"> • Font size throughout care plan should be at least 14, use dark lettering against a light background • Multiple modes of delivery (paper, electronic, e-mail) • Deliver to patient and all members of the inter-professional team • This information should be listed in a simplistic manner • Include any residual toxicities from treatment • Discussion of possible side effects from ongoing cancer treatment • List medical comorbidities and address who is responsible for managing each comorbidity during survivorship. • Polypharmacy assessment • Physical function, falls, nutrition, cognition, mental health, social support • Build inter-professional team around assessment of patient's needs • Set goals for team • Track progress • Identify when needs change • Include caregiver or other relevant family, friends in plan as applicable to the patient • Emphasis on physical activity and its relationship to preventing cognitive and functional decline • Specific geriatric resources: area agency on aging, senior center, etc.
General information	
<ul style="list-style-type: none"> • Patient demographics • Provider information 	
Treatment summary	
<ul style="list-style-type: none"> • Diagnosis: pathology, date diagnosed, stage • Treatment completed, including surgery, radiation, and chemotherapy • Ongoing cancer treatment (i.e., hormonal therapy for breast cancer) 	
Medical comorbidities	
Medications	
Geriatric syndromes assessment	
Follow-up care plan	
<ul style="list-style-type: none"> • Possible late and long-term effects • Symptoms to report to provider • Schedule of clinical visits (including test to be done, provider to coordinate, when and how often) 	
Lifestyle and behaviors to consider

Geriatric Assessment Guidelines

Mohile, Dale...Hurria,
JCO, 2018

Box 2: Summary of a Minimum Data Set for Practical Assessment of Vulnerabilities in Older Patients With Cancer

See [Table 1](#) for more details and rationale.

1. Predict chemotherapy toxicity (if clinically applicable): Cancer and Aging Research Group or Chemotherapy Risk Assessment Scale for High-Age Patients tools
2. Estimate (noncancer) life expectancy (if clinically applicable): ePrognosis
3. Functional assessment: instrumental activities of daily living
4. Comorbidity assessment: medical record review or validated tool
5. Screening for falls, one question: how many falls or falls with an injury have you had in the previous 6 months (or since your last visit)?
6. Screening for depression: Geriatric Depression Scale or other validated tool
7. Screening for cognitive impairment: Mini-Cog or Blessed Orientation-Memory-Concentration test
8. Screening for malnutrition: weight loss/body mass index

Supportive Care Assessment: Older vs. Younger Patients

Over 65

Fatigue	34%
Sleeping	34%
Side effects of treatments	31%
Pain	29%
Walking, climbing stairs	29%
Bowel movement constipation	23%
Joint Limitations	20%
Transportation	20%
Solving problems	19%
Questions about end of life	18%

Under 65

Finances	39%
Sleeping	38%
Side effects of treatment	33%
Fatigue	35%
Pain	31%
Feeling anxious or fearful	29%
Managing work, school, home	24%
Fear of Medical Procedures	23%
Managing my emotions	23%
How my family will cope	22%
